Distribution by service providers for wireless broadcasting services

source: National Media and Infocommunications Authority, Hungary

Note: The market shares were defined of the total market's estimated values based on the number of wireless subscriptions (DTH, coded DVB-T,).

Definitions of concepts used in the report:

Broadcasting: based on Act No. LXXIV, 2007 (on the rules of broadcasting and digital switchover). Electronic communication service provided via any of the transmission networks, whereby analogue or digital broadcasting signals are transmitted from the program provider to the receiving set of the subscriber or user, regardless of the transmission network and technology applied. In particular, the following shall be regarded as broadcasting: free-to-air broadcasting, satellite broadcasting, broadcasting via a hybrid fibre-coax transmission system, as well as broadcasting a program by a transmission network using an Internet Protocol, if the type or conditions of the service are equivalent to those of broadcasting or this method substitutes broadcasting performed in another way. Broadcasting accessible by a subscriber as a separate service or included in a package together with other electronic communications services against a fee shall also be regarded broadcasting. However, signal transmission via a network suitable for connecting less than 10 receiving sets shall not classify as broadcasting.

Wired broadcasting: Broadcasting subscription service provided through cable television networks (CATV) and IP networks (IPTV).

Wireless broadcasting: Satellite (DTH) broadcasting service subscriptions.

CATV: Cable television network. Cable television networks are wired infrastructures capable of distributing radio and television signals to subscribers.

IPTV: (Internet Protocol Television) Digital television service provided through IP (Internet Protocol).

DTH: (Direct-to-Home) Broadcasting service provided through satellites.

Set-top-box: Electronic device connected to the television set and an external signal source, capable of converting the incoming signals to content that can be displayed on the television screen.

MinDig TV Extra: Broadcasting subscription service - on DVB-T standard - provided by Antenna Hungária.

DVB-T: (Digital Video Broadcasting - Terrestrial) the standard of digital terrestrial video broadcasting.

Smart kártya: Smart card provided by service provider which is necessary to use of MinDig TV Extra coded service.

Market size: Determined by expert estimates based on data collected by the National Media and Infocommunications Authority for the entire market, and market research information.
